Reviewer's report

Title: Serum procalcitonin elevation in the critically ill patients at the onset of bacteremia caused by either gram negative or gram positive bacteria

Version: 2 Date: 28 February 2008

Reviewer: benjamin tang

Reviewer's report:

The authors have responded to the previous comments and the manuscript has been improved. The conclusion is now consistent with the data presented. However, the manuscript can still benefit further with some re-work on the use of English.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
