Reviewer's report

Title: Clinical and Ultrasonographic Features of Abdominal Tuberculosis in HIV Positive Adults in Zambia

Version: 1 Date: 15 October 2008

Reviewer: Gary Maartens

Reviewer's report:

This is a carefully conducted study which is well written. It is a pity that only 31 subjects were finally studied, but the reasons for drop out reflect the reality of practice in African hospitals. The data is of interest to practice in resource-limited settings

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
