Reviewer's report

Title: Seroprevalence of IgG antibodies to pertussis toxin among medical students in the west of Iran

Version: 1 Date: 1 February 2009

Reviewer: ülfet vatansever

Reviewer's report:

The question posed by the authors is well defined.
The methods are appropriate but randomization should be explained more clearly.
The data are sound.
The manuscript adheres to the relevant standards for reporting and data deposition.
The discussion and conclusions are well balanced and adequately supported by the data. However first sentence of the discussion is not understandable. It should be rewritten.
Limitations of the work are not clearly stated.
The authors clearly acknowledge any work upon which they are building.
The title and abstract accurately convey what has been found.
I think the writing is acceptable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
