Reviewer's report

Title: Pseudomonas aeruginosa in a neonatal intensive care unit: molecular epidemiology and infection control measures

Version: 2 Date: 24 April 2009

Reviewer: Vladana Milisavljevic

Reviewer's report:

I have re-reviewed revised article by Crivaro at al., “Pseudomonas aeruginosa in a neonatal intensive care unit: molecular epidemiology and infection control measures”, that is addressing molecular epidemiology of P. aeruginosa in the NICU and infection control measures adopted to stop the spread of the organism. Authors’ have made substantial changes to the manuscript according to the reviewers’ points. I find the revised article suitable for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
