Comments to the Author
I think the revised manuscript is improved. There is only 1 minor concern, that is the presented summarized P-values in the abstract results section page 2 line 17 ("P <0.05 for means, P = NS for SD for all comparison"). This is not precise, as presented in table 1, the difference between measured mean values are not significant for all comparisons.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
