Reviewer's report

Title: Thyroid Shields and Neck Exposures in Cephalometric Radiography.

Version: 2 Date: 25 May 2006

Reviewer: david manson

Reviewer's report:

General
This paper has been amended to my satisfaction, and should be published.
In contrast to the second reviewer, I must state that, having just returned from the International Pediatric Radiology meeting in Montreal, where a very large part of the conference was dedicated to radiation dose reduction to children, this paper SHOULD NOT have "limited interest", as noted by that reviewer. This type of paper should be given widespread attention, and I know of several radiology journals that would be interested in this article if it does not get published here.

--------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

--------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

--------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
