Reviewer's report

Title: Abdominal Ultrasonography in HIV/AIDS Patients in Southwestern Nigeria

Version: 1 Date: 18 September 2007

Reviewer: Antonio Martínez-Noguera

Reviewer's report:

General
I suppose that the presence of ascites more frequently in HIV-seronegative patients is due to another pathological causes as cirrhosis, etc...??. This point could be explained with more clearness

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

---In the legend of Figure 1, must be eliminated the paragraph "with posterior shadowing" because the shadow doesn't exist in the ultrasound image

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

"I declare that I have no competing interest"
