Reviewer's report

Title: Transcranial Doppler ultrasonography predicts cardiovascular events after transient ischemic attack

Version: 2 Date: 9 June 2009

Reviewer: Diederik Dippel

Reviewer's report:

The authors have - in my view- responded satisfactorily to the points I raised. It remains a pity that they did not distinguish between symptomatic and asymptomatic stenoses. This might have increased the strenght of the associations with recurrent events.

Diederik Dippel

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
