Reviewer’s report

Title: The Neck-Region Polymorphism of DC-SIGNR in Peri-Centenarian from Han Chinese Population

Version: 4 Date: 22 August 2009

Reviewer: Michel Roger

Reviewer’s report:

The authors need to described in more details the recruitment procedures and the clinical/demographic characteristics of the study participants. The subjects were randomly selected from how many subjects, from where (hospitals, clinics, home, etc). What was the method used to randomly assigned the subjects. What is the % of peri-centenarian individuals in Dujiangyan community. What is the distribution of the different variables associated with life span (smoking, incomes, chronic diseases, etc) among the cases and controls.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
