Reviewer's report

Title: No Relationship between 2',3'-Cyclic Nucleotide 3'-Phosphodiesterase and Schizophrenia in the Chinese Han Population: an Expression Study and Meta-analysis

Version: 2 Date: 4 March 2009

Reviewer: Esa Veli Juhani Leinonen

Reviewer's report:

- On my mind a limitation: "no structural diagnostic interview metod was used" should be mentioned in chapter "Subjects".
- Also that "patients were selected to antipsychotics according to clinical decision" should be stated.
- Although promised in the answer of authors, the 5 SNPs are not given in the text in chapter "genotyping".

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
