Reviewer's report

Title: Frequency of Fabry disease in male and female haemodialysis patients in Spain

Version: 4 Date: 27 November 2009

Reviewer: Poh San Lai

Reviewer's report:

The authors have mostly addressed all the issues raised.

I have two further comments:

1) In table 1 column 3, it appears that the authors are describing the genotypes as changes at the protein level? For patients 6 and 7, the three letter amino acid code is preferred (http://www.hgvs.org/mutnomen/disc.html#frameshift). Please read the mutation nomenclature for changes at protein level.

2) Is the cDNA reference sequence used the same as the genomic sequence? If not, please indicate the cDNA reference number.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
