Reviewer's report

Title: A Follow-Up Study for Left Ventricular Mass on Chromosome 12p11 Identifies Potential Candidate Genes

Version: 1 Date: 12 April 2011

Reviewer: Guillermo Zalba

Reviewer's report:

This paper reports an interesting investigation that identifies potential candidate genes for left ventricular mass on chromosome 12p11 in a follow-up study. The introduction, the aim of the study, the methods, the results and the conclusions are rational and appropriate. I have no concerns.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
