Reviewer's report

**Title:** Association of HLA-B*5801 Allele and Allopurinol -Induced Stevens Johnson Syndrome and Toxic Epidermal Necrolysis: A Systematic Review and Meta-analysis

**Version:** 2  **Date:** 3 July 2011

**Reviewer:** Wichittra Tassaneeyakul

**Reviewer's report:**

This study is a review and meta-analysis of Association of HLA-B*5801 Allele and Allopurinol -Induced Stevens Johnson Syndrome and Toxic Epidermal Necrolysis.

The authors responded to the previous comments and suggestion of the reviewers.

Overall of the manuscript is acceptable. However, I still think that the discussion part are too long and need to be trimed.

There some sentence that need to be checked for gramma such as Table 3 ......., SJS/TEN cases were significantly more likely to carry HLA-B*5801 allele .......

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.

**Declaration of competing interests:**
