Reviewer’s report

**Title:** Functional examination of MLH1, MSH2, and MSH6 intronic mutations identified in Danish colorectal cancer patients

**Version:** 2  **Date:** 26 July 2013

**Reviewer:** Oliver Sieber

**Reviewer’s report:**

Minor Essential Revisions

Abstract. The Conclusion could perhaps be better framed in terms of the implications for patient management.

Results. Could the authors comment on IHC results in relation to intronic mutations classified as pathogenic vs non-pathogenic.

Results. Presumably, RNA from patients was not available to validate findings from minigene assays – this should be stated.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
