Reviewer’s report

Title: Deletion Xq27.3q28 in female patient with global developmental delays and nonrandom X inactivation

Version: 3 Date: 1 February 2013

Reviewer: Pietro Chiurazzi

Reviewer’s report:

I congratulate the Authors for the improvements made to their manuscript and hope that eventually a satisfactory explanation for their patient's phenotype will be identified, possibly by sequencing of the many genes included in the deletion on the normal (active) X chromosome. One minor question on Figure 3: why are some genes indicated in red and others in blue?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
