Reviewer’s report

Title: Identification of novel mutation in cathepsin C gene causing Papillon-Lefevre Syndrome in Mexican patients.

Version: 2 Date: 4 September 2012

Reviewer: Muhammad Tariq

Reviewer’s report:

Minor essential revisions
The manuscript is now in a good shape and authors responded accordingly to comments.
- In “discussion” section detail about the polyphen-2/score and residue conservation etc should be in “results” section as a separate sub-section. This would shorten discussion and more meaningful.
- Still I feel that reference section is not uniformly set e.g. few journal titles are written in full.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
