Reviewer's report

Title: The impact of population heterogeneity on risk estimation in genetic counseling

Version: 1 Date: 11 November 2003

Reviewer: Tim Reynolds

Reviewer's report:

General: This is a very interesting paper that is extremely apposite to an area of my current interest. It clearly defines the reason why multi-case sample contamination is a problem and explains how this can be evaluated. Overall, I can see no modifications that need to be made and would recommend that the manuscript be published.
