Reviewer’s report

Title: TM4SF10 gene sequencing in XLMR patients identifies common polymorphisms but no disease-associated mutation

Version: 2 Date: 3 August 2004

Reviewer: Carsten Bergmann

Reviewer’s report:

General

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

All raised points have been adequately addressed. Thus, in my view, the paper now merits publication in BMC Medical Genetics.

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:

None.
