Reviewer's report

Title: Glutathione S-Transferase omega 1 variation does not influence age at onset of Huntington's disease

Version: 2 Date: 18 March 2004

Reviewer: Luc Djousse

Reviewer's report:

General
Overall, the revised version of the manuscript has improved.

-------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None.

-------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

None.

-------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

The authors noted that expanded CAG repeat in this study explained 27.7% of the variance of AO. This is very low compared to at least 60% R-squared reported in the literature.

What next?: Accept after discretionary revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
