Reviewer’s report

Title: PITX2 mutations are not a common cause for transposition of the great arteries (dTGA)

Version: 2 Date: 23 March 2005

Reviewer: Diego Franco

Reviewer’s report:

General

The manuscript is now acceptable for publication.

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

First part of the first paragraph of the "Results & Discussion" subchapter should be omitted, it is redundant since that info is provided in the "Materials and Methods" subchapter. I am referring to the ethical statement.

I would be interesting if the authors could provide with some reference to the Genbank access number of the Pitx2 sequence used in their study.

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
