Reviewer's report

Title: Cardiac Conduction Abnormalities and Congenital Immunodeficiency in a Child with Kabuki Syndrome: Case Report.

Version: 2 Date: 23 May 2005

Reviewer: Helga Toriello

Reviewer's report:

General

----------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached) I still believe a facial photo is important. I understand the parents' refusal to allow publication. I know one of the geneticists in St. Louis, and if he says the child had Kabuki, I'll have to go along with that.

----------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct) I missed this the first time - on p. 3, you refer to this as Kabuki Make-up Syndrome (KMS); later in the article you call it Kabuki Syndrome. Please just call it Kabuki Syndrome (KS) throughout.

----------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
