Reviewer's report

**Title:** Cardiac Conduction Abnormalities and Congenital Immunodeficiency in a Child with Kabuki Syndrome: Case Report.

**Version:** 2  **Date:** 10 May 2005

**Reviewer:** Kim McBride

Reviewer's report:

General

This is a much improved paper. The authors have satisfactorily answered my previous questions. Since their original submission, several interesting papers on Kabuki syndrome have been published. This includes a detailed description of the phenotype and review of the literature (1), and an initial report of duplication of 8p22 in 8 patients with Kabuki syndrome (2) that has not been confirmed in several subsequent reports (3-5).

-------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------

**What next?:** Accept without revision
Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable
