Reviewer’s report

Title: Aging Syndrome Genes and Premature Coronary Artery Disease

Version: 2 Date: 23 June 2005

Reviewer: Robert Hegele

Reviewer’s report:

General

The authors have followe most of the reviewer suggestions.

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The paper must still be very carefully proof read. Some concerns include:

1. Numerals beside references (in many places, but for example see page 6, line 4 Arking 2003 #37). Please conform to journal style.

2. Please report decimals to one significant digit after the decimal point: see for example page 8, lines 1 and 2: 14.0% and 18.2%, etc...

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No
