Reviewer's report

Title: Combinatorial Mismatch Scan (CMS) for loci associated with dementia in the Amish

Version: 2 Date: 2 February 2006

Reviewer: Douglas Levinson

Reviewer's report:

General

The changes made in response to the reviews are adequate. The text now makes it more clear that this was an exploratory analysis with an interesting method and that "significance" is not being claimed.

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests:
