Reviewer's report

Title: Meta-analysis on the effect of the N363S polymorphism of the glucocorticoid receptor gene (GRL) on human obesity

Version: 3 Date: 5 April 2006

Reviewer: Dolores Corella

Reviewer's report:

General
The authors have answered all the original criticisms point by point in the letter to the reviewers. In addition, they have modified the manuscript according to the suggested changes. I think that these changes have significantly contributed to improve the quality of the manuscript and have clarified the initial confusion.

---------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

---------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

---------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

---------------------------------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
