Reviewer’s report

Title: Mutations in the 3'-untranslated region of GATA4 as molecular hotspots for congenital heart disease (CHD)

Version: 1 Date: 7 January 2007

Reviewer: Rumiko Matsuoka

Reviewer’s report:

General
I read this manuscript carefully. Unfortunately, the authors are hardly correcting manuscript compared with the last manuscript. I think that this manuscript is not suitable for BMC medical Genetics.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Reject because too small an advance to publish

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
