Title: Multiplex SNaPshot for detection of BRCA1/2 common mutations in Spanish and Spanish related breast/ovarian cancer families

Version: 2 Date: 11 June 2007

Reviewer: Lilian Jara

Reviewer's report:

Multiplex SNaPshot for detection of BRCA1/2 common mutations in Spanish and Spanish related breast/ovarian cancer families of the authors: Sandra Filippini, Ana Blanco, Ana Fernandez-Marmiesse, Vanesa Alvarez-Iglesias, Clara Ruiz-Ponte, Angel Carracedo and Ana Vega submitted for publication in BMC Medical Genetics. I have revised the new version submitted by the authors. They have taken into account the majority of the suggestions and comments I made in the first version, and I am now convinced that the PCR multiplex SNAPshot reaction is a good cost effective methods. Therefore, I think that now the manuscript is suitable for publication in BMC Medical Genetics.
