Reviewer's report

Title: Biopsy proven acute interstitial nephritis after treatment with moxifloxacin

Version: 1 Date: 1 March 2010

Reviewer: Michael Fischereder

Reviewer's report:

The authors report a case of acute interstitial nephritis after moxifloxacin therapy.

Major point:
This is not the first case. Unlike the authors statement, the previous case report on this topic was also based on a renal biopsy (reference 7, page 1261).

Minor point:
page 6, last paragraph, line 3: "... and he his renal function ..." is not complete

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
