Title: Cardiac and Vascular Structure and Function Parameters Do Not Improve with Alternate Nightly Home Hemodialysis: An Interventional Cohort study

Version: 2 Date: 22 August 2011

Reviewer: ercan ok

Reviewer's report:

Dear Editor,

First of all, my main concern is about the design of the study. However, after the authors' revision, I think the design of the study is more clearly explained. They mentioned that the poor attendance is one of the weaknesses of the study. The authors included sufficient information about the calcium and phosphorous abnormalities and treatment, kt/V values and pulse pressures. The authors also included the details of the methodology used in the regression analysis to the Methods section. They also mentioned that they checked and adjusted the order of the references and added a reference for the Dubois and Dubois method.

Yours sincerely

Prof. Dr. Ercan Ok

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
