Reviewer’s report

**Title:** Renal AA-amyloidosis in intravenous drug users - A role for HIV-infection?

**Version:** 2  **Date:** 22 October 2012

**Reviewer:** Eirini Grapsa

**Reviewer’s report:**

This retrospective study, "Renal AA-Amyloidosis in intravenous drug users. A role of HIV infection" despite the limitations because of the peculiarity of this population, and the quality of the written English, offer very important information about the frequency and the kind of Glomerulonephritis in this population and also about the role and the frequency of HIV infection in relation with the renal damage. So my opinion is to be published with minor revision.

**Level of interest:** An article whose findings are important to those with closely related research interests.

**Quality of written English:** Needs some language corrections before being published.

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
