Reviewer's report

Title: Unexpected outcome after sclerotherapy of simple renal cyst

Version: 2 Date: 2 May 2012

Reviewer: Bilgin Kadri Aribas

Reviewer's report:

1. This is an important and unique case in the sclerotherapy of simple renal cysts. So, this case report can be accepted for publication.

2. Also, I recommend the authors should explain the details of sclerotherapy as minocycline dose and duration. These details may be significant in the developing of renal cell carcinoma.

3. Sclerotherapy methods as needle-catheter and simple/multi-session should be added. The authors can use the new reference for this explanation which is below.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
