Reviewer's report

**Title:** Chronic kidney disease is associated with adverse outcomes among elderly patients taking clopidogrel after hospitalization for acute coronary syndrome

**Version:** 2  **Date:** 17 February 2013

**Reviewer:** Roy L. Soiza

**Reviewer's report:**

The authors have done a good job of answering the queries raised. I still feel the article is of limited clinical importance but its limitations are much better described now, and it adds some new information in quantifying the added risk of clopidogrel in chronic kidney disease.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
