Reviewer’s report

Title: Innate versus adaptive immunity in kidney immunopathology

Version: 1 Date: 3 June 2013

Reviewer: Ivan Moura

Reviewer’s report:

This commentary addresses the main crosstalks between the immune system and kidney injury. It offers a broad view of immune mechanisms (innate and adaptive) taking place during kidney diseases from different origins. It also challenge readers about the possibility of the use of immunosuppressive drugs in the treatment of immune-mediated nephritis. I believe that this manuscript will challenge clinicians in the field about future applications of immune modulation on the treatment of kidney diseases.

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
