Reviewer's report

**Title:** Age dependent parathormone level and different CKD-MBD treatment practice of dialysed patients in Hungary - results from nationwide clinical audit

**Version:** 3  **Date:** 14 April 2013

**Reviewer:** WAJEH QUNIBI

**Reviewer's report:**

The manuscript certainly reads much better now since it underwent extensive language editing. The information in this manuscript is important mainly to those who work in Hungary but I am still unable to find anything in their study that adds to our knowledge of the CKD-MBD in patients with ESRD in a more general way. The authors can go back and emphasize the parts of their results that they consider different from what we already know. I believe this is still doable.

**Level of interest:** An article of limited interest

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
