Reviewer's report

Title: An unusual case of glomerulonephritis in a patient with Non-Hodgkin Mucosal Associated Lymphoid Tissue (MALT) B-cell lymphoma

Version: 3 Date: 14 May 2013

Reviewer: Joachim Velden

Reviewer's report:

Minor essential revision:
The last review was not requested or intended to change the electron micrograph in Figure 3, but only the legend text. Instead of the new photo shown in the current Figure 3, the former version demonstrated the electron dense deposits much better and hence should be shown instead.

Discretionary revision:
Although the tuned IMF photos in Figure 2 do not convince me personally about the full-house nature of the deposits (at least lambda looks to me like contrast-enhanced background noise rather than a specific deposition), they depict what the authors feel and hence are suitable to demonstrate what they mean, so it might be acceptable.

Everything else is fine and acceptable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
