Reviewer's report

Title: Glomerular tip adhesions predict the progression of IgA nephropathy

Version: 1 Date: 20 June 2013

Reviewer: Omran Bakoush

Reviewer's report:

Major Compulsory Revisions:

1. The study focus in glomerular tip lesions but in the method section said (in order to focus on FSGS lesion the glomerular tip domain defined as ....). Please clarify better to make it clear for the readers.

2. In the discussion section the authors said: This is the first report to discriminate between glomerular tip adhesion and FSGS. How this done???? You may need to clarify this clearly in the study designs and in the result reporting.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
