Reviewer's report

Title: Incidence and outcome of contrast-associated acute kidney injury in a mixed medical-surgical ICU population: a retrospective study

Version: 3 Date: 19 December 2012

Reviewer: Thierry Krummel

Reviewer's report:

Dear authors,

Thank you for taking into account my comments and I now accept your article for publication.

However I still have 2 minor revisions to suggest:
- At the end of the third line of the discussion there is a "the" in excess
- The 27th line of the discussion I would replace "glomerular filtration rate" with "creatininemia." Indeed, although this term is used in the RIFLE criteria, with formulas like Cockroft, MDRD or CKD-EPI, based on creatininemia, we do not measure glomerular filtration rate but estimate it and this estimation is validated only with stable renal function.

Sincerely yours

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
