RE : Dynamic dyssynchrony is strongly associated with 2-year dialysis adequacy in continuous ambulatory peritoneal dialysis patients

I really appreciated the revised version of the manuscript. The authors have adequately addressed almost all my comments.

I have still some minor comments:

1. The LV dyssynchrony index should be described in the Abstract.

2. The authors conclude in the Abstract “Our study confirmed that cardiac function has an impact on dialysis adequacy”. I think that “cardiac function” should be replaced by “cardiac dysfunction”.
