Reviewer's report

Title: Hyponatremia is a Surrogate Marker of Poor Outcome in Peritoneal Dialysis-Related Peritonitis

Version: 3 Date: 18 April 2014

Reviewer: Mitra Mahdavi-Mazdeh

Reviewer's report:

The authors defined the aim very well. Especially they paid attention to the correlation of plasma Na and RRF.

Major Compulsory Revisions:
1. In the 1st table where the preliminary data are presented, the p value is necessary to be shown to see if there is any significant difference.
2. The comorbid diseases which may have any impact on plasma sodium should be mentioned thoroughly that if has been checked.

Minor Essential Revisions: The germs of peritonitis have been mentioned in the text and may not be necessary to be presented in a table.

4. Does the manuscript adhere to the relevant standards for reporting and data deposition?
5. Are the discussion and conclusions well balanced and adequately supported by the data?
6. Are limitations of the work clearly stated?
7. Do the authors clearly acknowledge any work upon which they are building, both published and unpublished?
8. Do the title and abstract accurately convey what has been found?
9. Is the writing acceptable?

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
