Howard Trachtman (trachtma@lij.edu)

Version: 2 Date: 1 Feb 2002

Reviewer: Dr Markus Ketteler

Level of interest: A paper of limited interest

Advice on publication: Other (see below)

The authors have now modified their interpretations and conclusions in an acceptable way, although there are still some concerns on my side. It is especially unfortunate that no data on hemodynamic effects of ACE inhibition in this patient cohort are available, but this point is now discussed adequately. Since this paper may be of some interest to specialists in the field, I would now rate it as acceptable for publication.
