Title: Polycystic Kidney Disease in Patients on the Renal Transplant Waiting List: Trends in Hematocrit and Survival

Authors:
Kevin C Abbott (kevin.abbott@na.amedd.army.mil)
Lawrence Y Agodoa (agodoal@extra.niddk.nih.gov)

Version: 1 Date: 24 Jul 2002

Reviewer: Prof Giorgio Splendiani

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Accept after discretionary revisions

Comments:
discretionary revision:
The bias of the current study is that the patients enrolled in renal transplant waiting list have been selected by general population on ESRD, because of the acceptance criteria in transplant waiting list. For this reason the better survival and the limitation of extrarenal manifestation could be due to transplant selected population characteristics.
