Reviewer’s report

Title: Familial Mediterranean Fever, Inflammation and Nephrotic Syndrome: Fibrillary Glomerulopathy and the M680I Missense Mutation

Authors:

Dr Patrick W Fisher (pfisher002@md.northwestern.edu)
L. Tammy Ho (ltho@enh.org)
Robert Goldschmidt (rgoldschmidt@enh.org)
Ronald Semerdjian (resenerdjian@enh.org)
Gregory W Rutecki (grutecki@enh.org)

Version: 5 Date: 30 Jun 2003

Reviewer: Avi Livneh

Level of interest: A paper whose findings are important to those with closely related research interests

Advice on publication: Other (see below)

The case report is a lot better. However, major problems remain:
1. Pyrin is not considered a transcription factor anymore.
2. Superfluous, irrelevant information on amyloidosis and on FMF related subjects in the Introduction and Discussion that has nothing to do with the present issue.
3. No attempt to link FGN to FMF on clinical or pathogenic grounds is being made.
