Reviewer's report

Title: Hypothyroidism attenuates protein tyrosine nitration, oxidative stress and renal damage induced by ischemia and reperfusion: effect unrelated to antioxidant enzymes activity

Version: 4 Date: 10 October 2005

Reviewer: Devinder Singh

Reviewer's report:

General

1. The authors state that the body weight of the animals decreased after thyroidectomy, whereas it should be the opposite.

2. The authors are once again suggested to decrease the number of references. Extensive literature survey doesn't means that you encompass every reference.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
