Title: Time course study of oxidative and nitrosative stress and antioxidant enzymes in K2Cr2O7-induced nephrotoxicity

Version: 2 Date: 1 February 2005

Reviewer: Kanwaljit Chopra

Reviewer's report:

General

----------------------------------------------------------------------------------
Authors have conducted a time-course study of oxidative and nitrosative stress in K2Cr2O7 nephrotoxicity in rats. The study has been well planned and conducted: I have the following suggestions:
1. Authors must indicate the method of collection of blood. They should also report the mortality data in each group.
2. What is the justification that there is no alteration of SOD activity whereas all the other enzymes decrease significantly after K2Cr2O7 administration?

----------------------------------------------------------------------------------
Few of the spelling mistakes have to be corrected (e.g. page 12, 2 Para, 5 line immunostaing??)

----------------------------------------------------------------------------------
