Title: Suckling A Protein-Restricted Rat Dam Leads To Diminished Albuminuria In Her Male Offspring In Adult Life: A Longitudinal Study

Version: 3 Date: 18 August 2006

Reviewer: Andrew Roddam

Reviewer's report:

General

The authors have responded to all my concerns in the previous version of this manuscript. I have only one minor change request relating to presentation - when discussing the results of the urine albumin etc they quote p-values coming from a Greenhouse-Geisser correction and a Huynh-Feldt correction to the repeated measures ANOVA. These corrections are to adjust for non-Sphericity of the data and they should, if they are going to be used, be referred to in the methods section and the authors should say why both, rather than one is being presented.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests
