Reviewer’s report

**Title:** Optimal and continuous anaemia control in a cohort of dialysis patients in Switzerland

**Version:** 2  **Date:** 22 July 2008

**Reviewer:** Donald Silverberg

**Reviewer’s report:**

The authors have satisfactorily answered all my questions. My only other question is the relationship between EPO dose and serum ferritin and TSat. The Swedes found that EPO dose was not at all related to serum ferritin levels but was closely related to TSat levels—the higher the TSat the lower the EPO dose. Was this relationship found in their studies?

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I have received fees for lectures from AMGEN, ROCHE and VIFOR for talks
