Reviewer's report

Title: Migraine headaches among university students using ID migraine test as a screening tool

Version: 2 Date: 29 July 2011

Reviewer: Filippo Brighins

Reviewer's report:

The authors made a considerable work adequately reviewing the paper and addressing the queries raised. I maintain however some doubt about relevance and originality of the study: in their reply authors say that their aim was to specifically explore prevalence of migraine in a turkish university students population through the ID migraine screener. However at least another study, cited also by authors, that by Bicakci et al, explored the same issue. I think this limitation should be clearly mentioned, stating that the study, even if not entirely new, is useful as it confirms the opportunity to evaluate migraine prevalence in a population where the disease could exert a relevant negative impact.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
