Reviewer's report

Title: Controversies in Neurology: why Monoamine Oxidase B Inhibitors Could Be A Good Choice for the Early Treatment of Parkinson's Disease

Version: 2 Date: 13 August 2011

Reviewer: Lawrence Elmer

Reviewer's report:

The authors have done an excellent job at addressing the concerns of the previous reviews. My only recommendation is that they request an editor to proofread and correct some of the grammatical errors - scattered throughout the document, the errors do not detract from the content of the paper but their correction would increase the "readability" quite nicely! (discretionary revision)

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
