Reviewer's report

**Title:** Mutations in WDR62 gene in Pakistani families with autosomal recessive primary microcephaly

**Version:** 1  **Date:** 21 July 2011

**Reviewer:** Martin Farrall

**Reviewer's report:**

Minor Essential Revisions

Figure 2: the legend needs more detail (e.g. which planes are shown), are these images distorted?

It is not clear if you have just tested 4 MCP families and all 4 happen to carry WDR62 mutations. Given the family numbering schema, it seems that you have access to scores of MCP families - put the results in context in terms of how many families have been screened for WDR62 (and/or other) mutations.

**Level of interest:** An article of limited interest

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
