Reviewer's report

Title: Variation in the circle of Willis in a Sri Lankan Population

Version: 10 Date: 14 October 2010

Reviewer: Douglas Curran-Everett

Reviewer's report:

General Comments

The authors have addressed statistical concerns raised in an earlier review. My comments pertain primarily to clarity of communication.

Minor Essential Revisions

1. Abstract, Results p 3, line 4. What statistically significant difference were found between studies? It is important to say precisely what differences you found. You state this later in the manuscript, but it is important to do so also in the Abstract.

2. Percentages, throughout the manuscript. Is 0.1% all that important? Percentages can be rounded to the nearest integer. They will also be easier to read.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
